

---

**Do you or someone in your family under the age of 65 have memory problems or early-onset Alzheimer's disease?**

**If so, we need your help!**

---

If anyone in your family is living with early-onset Alzheimer's disease (EOAD), you know how important it is to find a way to prevent it. The Early-Onset Alzheimer's Disease Family Study is a research study to find the genes that play a role in early-onset Alzheimer's disease and to learn more about the causes of Alzheimer's, and how to treat or prevent it.

**Families with memory problems or Alzheimer's disease starting before the age of 65 years can help us in this important research.**

**The EOAD Family study seeks families with early-onset memory problems or Alzheimer's disease (onset of memory symptoms before the age of 65).**

**Family members can live anywhere in the U.S.**

If this sounds like your family, we invite you to join us in our research to find out more about Alzheimer's disease, what causes it, and how we might prevent it for future generations.

**For more information on this study and to find out if, your family is eligible to participate, please call us at 212-305-1527 or contact us via email at [pib2102@cumc.columbia.edu](mailto:pib2102@cumc.columbia.edu)**
