

**Does someone in your family have memory problems or
Alzheimer's disease?**

If so, we need your help!

If anyone in your family is living with Alzheimer's disease, you know how important it is to find a way to prevent it. The National Institute on Aging-Late Onset Alzheimer's Disease Family Study (NIA-LOAD Family study) is a nationwide research study to find the genes that play a role in Alzheimer's disease (AD) and to learn more about the causes of AD, and how to treat or prevent it.

Families with memory problems or Alzheimer's disease can help us in this important research.

**The NIA-LOAD Family study seeks families with memory problems or
Alzheimer's disease**

Family members can live anywhere in the U.S.

If this sounds like your family, we invite you to join us in our research to find out more about Alzheimer's disease, what causes it, and how we might prevent it for future generations.

For more information on this study and to find out if your family is eligible to participate please call us at 212-305-2349 or contact us via email at imm2129@cumc.columbia.edu

The NIA-LOAD Family study is sponsored by the National Institute on Aging (one of the National Institutes of Health, U.S. Department of Health & Human Services).
